

Sarah Levy, MD — Internal Medicine

1492 Bryant St, Suite 305 — San Francisco, CA 94110

Patient: Chen, Sarah **DOB:** 11-Jun-1976 **MRN:** 4471028
Date of Service: 07/22/2024 **Visit type:** Annual physical

CHIEF COMPLAINT

Annual physical. No new complaints.

HPI

Annual physical. PMH: T2D (well-controlled), HLD (borderline). Will recheck lipids in 6 months.

Sarah returns for her routine annual physical. She is now 18 months out from her diabetes diagnosis. Her last A1c (04/03/2024) was 6.9%, at goal. Her April lipid panel showed an LDL of 145, which we discussed at the time and elected to manage with continued lifestyle measures rather than initiating a statin immediately. She has continued her Mediterranean-style diet and walks 30 min on most days.

REVIEW OF SYSTEMS

Constitutional: well. No fatigue, no weight changes. CV: no chest pain, no DOE. GI: well. GU: well. Endocrine: no symptoms of hypo/hyperglycemia. Neuro: no paresthesias.

VITALS

BP 122/76 HR 70 T 98.1°F Wt 165 lbs.

EXAM

General: well. Cardiovascular: RRR. Pulmonary: CTAB. Abdomen: soft, NT/ND. Diabetic foot exam: monofilament intact, pulses 2+, no breakdown. Skin: no new lesions.

ASSESSMENT & PLAN

- T2D, well controlled.** A1c 6.9% (April). Continue current regimen. Annual diabetic eye exam due — referral pending.
- HLD, borderline.** LDL 145 in April. Will recheck in 6 months as planned. Have a low threshold to initiate moderate-intensity statin if LDL stable or rising at next check.
- Health maintenance.** Mammogram up to date (last 06/2023). Colonoscopy due in 2026. Tdap booster offered today, declined (received Sep 2022).

Next visit: 6-month interval f/u in January 2025; lipids drawn one week prior.
