

Westside Breast Imaging — Mammography Report

Patient: RODRIGUEZ, MARIA **DOB:** 03/14/1972
MRN: WBI-228814 **Referring Provider:** Wu, Karen, MD
Exam Date: 02/22/2024 **Reported:** 22-Feb-2024 1612 PT
Exam: Bilateral screening mammogram, digital breast tomosynthesis (DBT)
Comparison: Prior mammogram dated 04-Feb-2022 available for comparison.

TECHNIQUE

Standard CC and MLO views obtained of both breasts with tomosynthesis. Digital images reviewed on PACS workstation. CAD applied.

CLINICAL HISTORY

Routine screening. Asymptomatic. No prior breast surgery. Family history of breast cancer in maternal aunt (age at dx ~60s).

FINDINGS

The breasts are heterogeneously dense (ACR category C), which lowers the sensitivity of mammography for small masses.

Right breast:

FINDINGS: 1.2 cm spiculated mass identified in right breast at the 11 o'clock position, approx 3 cm from nipple. **ASSESSMENT:** BI-RADS 4 — Suspicious abnormality. Biopsy recommended.

The mass is new compared to the 02/2022 prior. No associated calcifications. No skin or nipple retraction. No axillary lymphadenopathy.

Left breast: No suspicious mass, asymmetry, or microcalcifications. Stable compared to prior.

IMPRESSION

1. New 1.2 cm spiculated mass in the right breast at 11 o'clock, 3 cm from the nipple. Suspicious for malignancy. **BI-RADS 4.**

2. Recommend ultrasound-guided core needle biopsy of the right breast mass.

3. Left breast: BI-RADS 1 (negative).

Overall assessment: BI-RADS 4 — Suspicious abnormality. Biopsy recommended.

Recommendation communicated to Dr. Wu by secure message at 1605 on 02/22/2024.

— Daniel Park, MD, Diagnostic Radiology, MQSA-certified.
