

Quest Diagnostics — Laboratory Report

Patient: CHEN, SARAH **DOB:** 06/11/1976 **Sex:** F

Ordering Provider: Levy, Sarah, MD **Account:** 4471028

Specimen: Whole blood (EDTA + SST)

Collected: 04/03/2024 0741 PT **Received:** 04/03/2024 1438 PT

Reported: 03-Apr-2024 1947 PT **Report ID:** Q-2024-0403-0044712

HEMOGLOBIN A1C (GLYCATED HEMOGLOBIN)

Hemoglobin A1c: 6.9 % (H). Reference range 4.0-5.6 %. Note: at target for diabetic patients (<7.0).

Test	Result	Flag	Reference Range
Hemoglobin A1c	6.9 %	H	4.0 - 5.6 %
Estimated Average Glucose	151 mg/dL	H	68 - 117 mg/dL

INTERPRETATION

A1c trended from 7.2% (08/21/2023) to 6.9%. This is the patient's first result at or below the ADA-recommended treatment target of <7.0% for non-pregnant adults with diabetes. Sustained values in this range are associated with reduced risk of microvascular complications.

METHODOLOGY

HPLC, NGSP-certified.

LIPID PANEL (FASTING)

LDL Cholesterol: 145 mg/dL (H). Reference: <100 mg/dL optimal.

Test	Result	Flag	Reference Range
Total Cholesterol	218	H	<200 mg/dL
LDL (calculated)	145	H	<100 mg/dL optimal
HDL	51		>40 mg/dL
Triglycerides	110		<150 mg/dL
Non-HDL Cholesterol	167	H	<130 mg/dL

INTERPRETATION

LDL is borderline elevated. In the context of co-existing T2D, current ADA guidance recommends consideration of moderate-intensity statin therapy regardless of LDL value when 10-year ASCVD risk exceeds 7.5%. Decision left to the discretion of the ordering provider.
