

Karen Wu, MD — Obstetrics & Gynecology

2200 Geary Blvd, Suite 410 — San Francisco, CA 94115

Patient: Rodriguez, Maria **DOB:** 14-Mar-1972 **MRN:** 8821345

Date of Service: 05/02/2024 **Visit type:** Follow-up

CHIEF COMPLAINT

Follow-up after benign breast biopsy.

HPI

Pt returns to discuss benign biopsy result. Reassured. Will resume routine annual screening mammogram.

Maria returns to discuss the results of her right breast core needle biopsy performed on 03/28/2024 by Dr. Patel. Pathology returned on April 3, 2024 demonstrating a fibroadenoma with no evidence of malignancy. She has reviewed the result with Dr. Patel previously by phone but wanted to also debrief in person and confirm next steps from the gynecology side.

She reports that the biopsy site has healed without issue. No persistent bruising, no infection, no nipple discharge. She has resumed monthly self-breast exams. Her anxiety from the period between mammogram and biopsy result has resolved, though she notes she will be "more nervous than usual" next time around mammogram season.

REVIEW OF SYSTEMS

Constitutional: well. GYN: no abnormal bleeding. Breast: as in HPI. Mood: stable, no symptoms of depression or anxiety meeting criteria for intervention; she declined a referral to behavioral health.

VITALS

BP 120/76 HR 70 T 98.1°F Wt 144 lbs.

EXAM

Breasts: biopsy site on the right breast at 11 o'clock is well-healed, no induration, no skin changes. No new masses bilaterally. No lymphadenopathy.

ASSESSMENT & PLAN

1. **Right breast fibroadenoma, biopsy-confirmed, status post core needle biopsy 03/28/2024.** Reassurance provided. No change in standard screening interval indicated; will resume routine annual screening mammogram next February (~12 months from the diagnostic series).

2. **Routine GYN follow-up.** Continue annual visits.

3. Health maintenance. As previously documented; nothing newly due.

Next visit: annual GYN, scheduled 02/14/2025.
